DNFT-LED-PS

SPECIFICATIONS

P/N: 000507

DNFT-LED-PS

Material	Stainless Steel, Aluminum
Temperature Range	40º F to +185ºF
Switch Rating	2.5VA/240 VDC
Epoxy Encapsulated	UL LISTED EL-CAST VFR 641
Alarm/Shutdown	Factory default for 3 minute alarm
Power	Field Replaceable - Lithium Battery
Battery	
Alternate Battery	Radio Shack 960-0418
Divider Block ApplicationDropsa/Lincoln/SBCO/	
	Lubriquip
Warranty	

II 2G EEx md IIC T5 Cl I; Zone 1; Ex md IIC T4

KEMA 00ATEX1090 X Amb. -40° C...+80°C

186200 Cl I; Div 1; Grps. A,B,C,D;T4

MONITORS MOVEMENT OF DIVIDER VALVEPISTON FOR DEPENDABLE **"TIMED" SHUTDOWN PROTECTION**

CLOSED LOOP OR OPEN LOOP OPERATION

INSTALLS DIRECTLY TO DIVIDER VALVE

■ NOT AFFECTED BY TEMPERATURE OR OIL DESCRIPTION VISCOSITY

REQUIRES NO EXTERNAL POWER

LED INDICATOR - CYCLE INDICATION

DEDICATED SWITCH CLOSURE TO MONITOR EACH DIVIDER VALVE CYCLE (PS OPTION)

FIELD REPLACEABLE BATTERY

Distributed by:

ับร

RATINGS

The DNFT-LED is a totally enclosed electronic device, combining the latest technology in microprocessor and transistor components for detecting Slow-Flow and No-Flow of divider block lubrication systems. The DNFT incorporates an oscillating crystal to accurately monitor the cycle time of the lubrication system to enable precision timed shutdown capability. The magnet assembly and control housing mount directly to the divider valve to become an integral part of the lubrication system. The DNFT operates on a field replaceable lithium battery. If battery voltage drops below normal operating levels the DNFT goes into alarm mode and the unit cannot be restarted. LED models utilize an LED to indicate each cycle of the divider valve. This enables the operator to easily set and monitor lubrication rates.

OPERATION

Lubricant flow through the divider valve assembly forces the pistons to cycle back and forth causing a lateral movement of a magnet linked to the piston. Movement is monitored by the microprocessor which resets the timer, lights the LED, and allows the unit to continue operation, this indicates one complete cycle of the lubrication system. The microprocessor must receive this cycle in a predetermined time or a shutdown will occur. The DNFT will automatically reset alarm circuit when normal operation of divider valve resumes.

- 10.DNFT must be installed with correct magnet assembly for each divider valve manufacturer.
 - Lincoln-7/16"-20 extended nose with O- ring
 - Trabon-1994 or earlier 7/16"-20 with metal crush gasket

SBCO & Trabon-1995 and up 7/16"-20 with O-ring Notice: When installing more than one DNFT, each DNFT must be wired to a separate alarm circuit

Dropsa

of the control panel, annunciator or PLC to simplify troubleshooting the lubrication system and DNFT.

B LES

NOTICE: WHEN MORE THAN ONE DNFT IS INSTALLED ON THE COMPRESSOR OR ENGINE, EACH DNFT MUST BE WIRED TO A SEPARATE ALARM CIRCUIT ON THE CONTROL PANEL. ANNUNCIATOR OR PLC TO SIMPLIFY TROUBLESHOOTING THE LUBRICATION SYSTEM AND DNFT.

SERVICE PROCEDURE AND / OR CORRECTION PROBLEM POSSIBLE CAUSE Loosen set screws, slide DNFT all the way onto hex of magnet housing and 1. LED does Not torque to 25 inch pounds max.(Do not over tighten) Cycle divider valve by Blink, Control A. Improperly Adjusted pumping clean oil through system with lubrication system purge gun or running **Panel Indicates** DNFT Lube No-Flow compressor. If necessary, adjust DNFT 1/16" back until LED blinks with each (See also, 3.Erratic shutdown) cycle of divider valve. Loosen set screws, remove DNFT from magnet housing. Remove magnet SPRING SPACER B. Spring or Magnet is assembly from divider valve. Remove magnet, spacer and spring. Check MAGNET components for damage. Replace damaged spring and/or magnet and install on Broken in Magnet m 9000000000 divider valve. If necessary, adjust DNFT, check for LED blink. Purge air from Assembly system with lubrication system purge gun. MAGNET HOUSING (HEX) Remove the battery from the DNFT per the attached instructions. Replace the battery if the voltage is below 2.5 volts using a factory recommended replacement C. Low Battery voltage batterv. Loosen set screws, remove DNFT from magnet housing. Check for damaged or bent magnet housing. Remove magnet assembly from divider valve. Replace D. Bent Magnet Housing magnet housing, magnet, spring and spacer. Re-install DNFT on magnet STRAIGHT OK ! BENT REPLACE ! housing. If necessary, adjust DNFT, check for LED blink. Purge air from = system with lubrication system purge gun. Loosen set screws and remove DNFT from magnet housing. Check for correct 2. After installation of A.Wrong Magnet Housing. magnet housing for divider valve manufacturer. Remove and replace with correct DNFT, Rupture Disc is Installed on Divider Valve Blown and Divider Valve magnet housing. Replace DNFT on magnet housing. If necessary adjust DNFT, (See magnet assy. Below) is Locked up. check for LED blink. Purge air from system with lubrication system purge gun. Check system pressure insure oil is flowing to divider valves. If necessary install pressure gauge to monitor operation of lubrication system. B. Air or Debris in **Divider Valve** 1. Loosen outlet plugs in front of valve blocks. Fast purge the system with System. lubrication system purge gun until clean, clear, air free oil appears from plugs. 2. Loosen each piston enclosure plug individually to purge air from behind PISTON ENCLOSURE, piston. Do not remove piston enclosure plugs. Tighten all divider valve plugs. PLUGS Adjust DNFT. To insure proper operation of the divider block lubrication system, it is absolutely necessary that all tubing and components be filled OUTLET PLUGS with oil and free of air before start-up. 1. NORMALLY OPEN - Attach ohmmeter to red wires. Meter should read 10 megaohms in operation and less than 10 ohms in alarm state. ELETRICAL TESTING OF DNFT ALARM CIRCUIT 2. NORMALLY CLOSED - Attach ohmmeter to orange wires. Meter should read less than 10 ohms in operation and infinity in alarm state. Check system pressure to insure oil is flowing to divider valves. If necessary, install pressure gauge to monitor operation of lubrication system. Check gauge to insure pump will build sufficient pressure to inject oil into cylinder. You cannot Faulty Lube Pump check for oil flow into cylinder by removing tubing from check valve and pumping oil to atmosphere. Replace pump. TYPICAL **DNFT**INSTALLATION **Magnet Assemblies and Applications** DNFT must be installed with correct magnet assembly for each divider valve manufacturer. O-RING OR SBCO &TRABON METAL GASKET Magnet Assy # 000004 INTERNAL VIEW OF m O-Ring Seal 7/16"-20 DIVIDER VALVE uuu Trabon Metal Gasket Seal GITAL NO-FLOW TIMER Magnet Assy # 000011 1994 or Earlier Î CYCLE INDICATION E 7/16"-20 IIII 245 OIL Zone I: Fx and IIC TA Lincoln O-Ring Seal Magnet Assy # 000012 Extended Nose DNFT-LED-PS 7/16"-20 PISTON ENCLOSURE PLUG - DIVIDER VALVE Magnet Assy # 000013 Dropsa No Gasket r MM CAUTION: DISCONNECT ALL WIRING PRIOR TO WELDING ON COMPRESSOR OR SKID. DNFT BATTERY REPLACEMENT INSTRUCTIONS

Directions for replacing the battery in the Digital No Flow Timer.

- 1. Shut down the engine or set the bypass timer.
- 2. Use a 3/8" ratchet to remove the 1/2" NPT Pipe plug.
- 3. Remove the battery from the DNFT and disconnect from the polarized connector.
- 4. Connect the new battery to the attached polarized plug.
- 5. Reinsert the battery and reinstall 1/2" NPT Pipe plug.
- 6. Verify the DNFT is working by pre-lubing the system and check for LED blink.

ITEMS REQUIRED FOR REPLACING THE DNFT BATTERY:

(1) P/N: 000505 BATTERY or RADIO SHACK P/N: 960-0418 (alternate replacement) (1) 3/8" RATCHET WRENCH (for removal of battery plug)
